

VIRTUAL CODE

COMPLETE

HTML

TUTORIAL IN HINDI

LEVEL 1

INTRODUCTION TO HTML

HTML- Hyper Text Markup Language

- HTML is the language of the web .it is used to create website.
- HTML is used to defining layout of a page .
- CSS is used to add styling to that page created using HTML.
- Java Script is used to program logic for the page layout.

LEVEL 2

Creating Our First Website

A basic HTML page-

`<!DOCTYPE html>` → Specifies this is an HTML 5 doc

`<html lang="en">` → Root of an HTML page

`<head>` → Contains page meta data

`<title>my first website</title>` → Contains title

`</head>` → Head closing tag

`<body>` → The main body of page (rendered by the browser)

`<h1>VIRTUAL CODE</h1>` → Heading tag

`<p>my paragraph</p>` → Paragraph tag

`</body>` → Closing body tag

`</html>` → Closing HTML tag

Comments In HTML-

- Comments in HTML are used to mark text which should not be passed. They can help document the source code .

```
<!-- HTML comment -->
```

Case Sensitivity-

- HTML is a case insensitive language `<H1>` and `<h1>` tags are same.

LEVEL-2 Practice sheet

- Inspect your favourite website and change something in the page which is displayed.
- Go to your favourite website and try to view the page source and write the exact lines of code ,does it clone the website? Why?
- Write any HTML code inside a text file.does it work if you write it using notepad?

LEVEL 3

Basic HTML Tags

HTML Element

```
<body> —→ Opening Tag  
|  
| <!-- content -->  
|  
</body> —→ Closing Tag
```

HTML Attributes

- Used to add more information corresponding to an Html Tag.

- For Example :

```
<a href="https://google.com">Google</a>
```

anchor Tag

href attribute

- We can either use single or double quotes in attributes.

The Heading Tag

- The Heading Tag is used to mark heading in HTML from h1 to h6.
- We have tags for the most important to the least least important heading.

```
<h1>most important heading</h1>  
<h2>another heading</h2>  
<h3>another heading</h3>  
<h4>another heading</h4>  
<h5>another heading</h5>  
<h6>another heading</h6>
```

The paragraph Tag

- Paragraph tags are used to add paragraph to an HTML tag.

```
<p>This Is Paragraph</p>
```

The anchor Tag

- The anchor tag is used to add links to an existing content inside an HTML page.

```
<a href="https://google.com">Google</a>
```

The Img Tag

- Img Tag is Used to add images in an HTML Page.

```

```

Relative url of an image.

Bold, Italic and Underline Tags

- We can use bold, italic and underline tags to highlight the text as follows:

```
<b>This is bold</b>  
<i>This is italic</i>  
<u>This is underline</u>
```

br Tag

- The br tag is used to create line Breaks in HTML document.

big and small tag

- We can make the text a bit longer and a bit smaller using big and small tags respectively

hr Tag

- <hr> tag in HTML is used to create a horizontal ruler often used to separate the content.

Subscript & superscript

- We can add subscript and superscript in HTML as follows:

```
<sub>this</sub>is subscript  
<sup>this</sup>is superscript
```

pre Tag

- HTML always ignores extra spaces and newlines, In order to display a piece of text as is, we use pre tag.

```
<pre>  
    this is      written  
    using pre  
    tag  
</pre>
```

LEVEL-3 Practice sheet

- Creating an HTML page with a heading(title heading),a primary heading and a secondary heading and a subheading.

Which tags did you use?

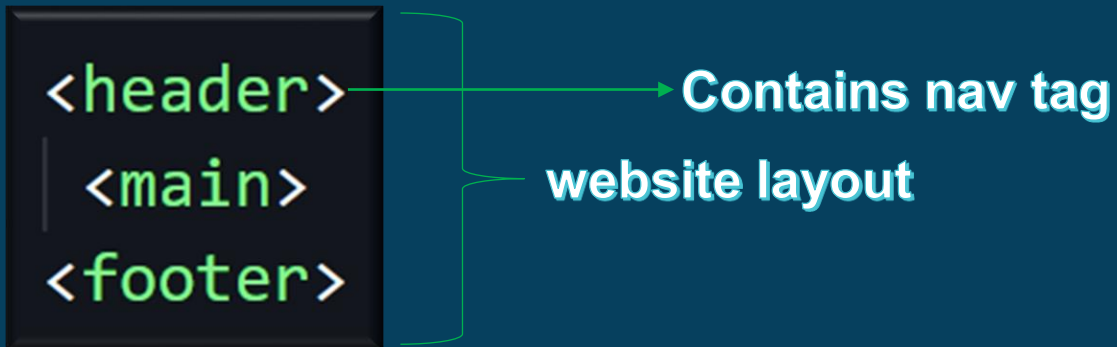

- Create a page with 5 wallpaper images taken from the internet.
- Use br and hr tags to display a piece of text with linebreaks
- Try to write the following formula using HTML.

$$(a+b)^2 = a^2 + b^2 + 2ab$$

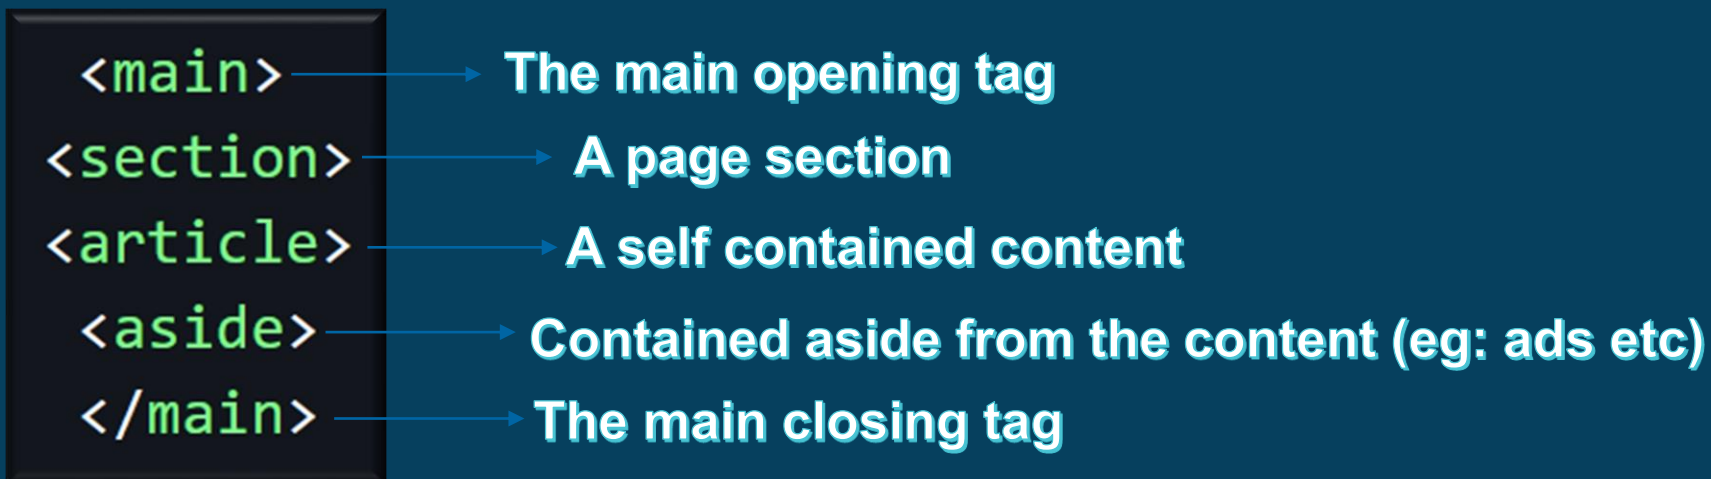

LEVEL 4

Creating a page layout

Creating Page Layout

- Inside the main tag we insert the following tags:

Link attributes

```
<a href="contact.html">contact us</a> —→ Contact page opens in same tab  
<a href="contact.html" target="blank">contact us</a>
```

opens in a new tab

- We can put any content inside an anchor tag (images, headings etc all are allowed)
- We can add links to images like this:

```
<a href="home.html"></a>
```

Height will be set automatically

The Div Tag

- Div tag is often used as a container for other elements .
- Div is a block level element.

└─→ **Always takes full width.**

The span Tag

- Span is an inline container.

└─→ **Takes as much width as necessary.**

LEVEL-4 Practice sheet

- Create an SEO friendly website using HTML.
- Create an HTML page which opens amazon when clicked on an image.
- Create a website which has your 5 top used website bookmarked. The link should open in a new tab.

LEVEL 5

Lists, Tables and Forms

Lists

- Lists are used to display content which represents a list.

Unordered List:

- Used to list unordered items

```
<ul>  
  <li>Home</li>  
  <li>About</li>  
  -  
  -  
</ul>
```

ordered List:

- Used to list ordered items

```
<ol>  
  <li>Home</li>  
  <li>About</li>  
  -  
  -  
</ol>
```

Tables

- The `<table>` tag is used to define tables in HTML.

tr tag: Used to display table row.

td tag: Used to display table data.

th tag: Used in place of table data for displaying table headers.

- To add a caption to the table , we use `<caption>` tag inside table.

thead tag: Used to wrap table head(caption & tr with th)

tbody tag: Used to wrap table body.

Colspan attribute

- This attribute is used to create cells spanning multiple columns

```
<th colspan="3">VIRTUAL CODE</th>
```

Spans 3 columns

HTML Forms

```
<form>  
  <!-- element of the form -->  
</form>
```

- There are different form elements for different kinds of user input.

-Input element : Can be of type text,checkbox,radio,button and submit.
We also have a 'file' type.

-textarea element : Defines a multiline text input cols and rows attributes can be used to size the textarea.

-Select element : Defines a drop down list.

Video tag

- Video tag is used to play video in HTML.

```
<video src="ayush.mp4">error</video>
```

Audio tag

- Audio tag is used to play audio in HTML.

```
<audio src="ayush.mp3"></audio>
```

LEVEL-5 Practice sheet

- Create an HTML page video embedded inside it.
- Replace this video in 1 with a youtube video.
- Create an HTML Form for the enrolment of the student.
- Create a table displaying score of players in gully cricket using HTML.
